E2E Coding Test v1.0

Overview

Attached is a small Angular web application that provides a countdown timer. A user can set hour, minute, and second values, then start a countdown with those values. When the countdown finishes, an alert will be displayed notifying the user.

To see the project in your browser, install npm dependencies and run 'ng serve' in your Terminal.

Your Task

Implement the Protractor end-to-end tests that have been stubbed out in `e2e-test/e2e/src/timer.po.ts`. If desired, you may also extend the TimerPage class in `e2e-test/e2e/src/timer.e2e-spec.ts`. Run the tests with 'ng e2e'.

Bonus Points

Can you find any bugs in the Countdown Timer?
